

STRIP THICKNESS

LASER GAUGES VTLG

www.vollmergmbh.de

APPLICATION

- ▶ Metal strip

FUNKTION

- ▶ On the upper and lower sides of a C-frame is a compact measuring head which both transmits the measurement beam and receives the reflected light.
- ▶ Both sensors measure the distance from the strip surface. The system then calculates the thickness of the strip from the measured distances and the distance between the two sensors.

ADVANTAGES

- ▶ Installation directly in the mill possible
- ▶ Direct, absolute measurement irrespective of the alloy
- ▶ Precision up to one micrometer per millimeter of strip thickness
